

VIDEX Intercom Systems

Videx intercom systems are the most popular add-on to our standard gate automation kits. We offer a range of intercom systems to suit every application, and the technical assistance required to get you up and running.

Audio and Video intercoms can be supplied 'stand alone' or combined with a digital entry pad. These digipads allow access upon entry of the correct 4 or 5 figure code.

The intercoms detailed here are our biggest selling units. If you cannot see what you want, please call or email us and we will be pleased to assist.

'Videx' intercoms offer excellent quality and value. Simple wiring diagrams are supplied for easy connection to gate control panels.

Audio Intercoms and Digipads

VIDEX EK 911 AUDIO INTERCOM: (pictured right)

The EK 911 is our most popular audio intercom.

This well built unit is supplied with a weather shield and simple wiring diagram (requires 5 core cable).

The EK 911 will run with a maximum of three telephone handsets and represents excellent value for money.

VIDEX TWK AUDIO INTERCOM – Easy wiring:

As above but simplified to use just two cores. The ultimate in easy wiring with the added bonus of a digital call tone.

VIDEX DK 918 (DK 1S) DIGIPHONE: (pictured right)

Combined audio intercom and digipad.

Our best selling system.

The DK 918 combines a high quality audio intercom with the robust VX 800 digital entry pad in a single, neat unit with a wrap around weather shield.

The keypad is illuminated for night time use.

The system will run up to three separate telephone handsets.

VIDEX – ADDITIONAL TELEPHONE HANDSETS: (pictured right)

Additional telephone handsets can be added to Videx audio intercoms. A majority of audio systems will take up to three telephones which are wired in series and can be situated as required.

Video Intercoms and Digipads

VIDEX VK 6 VIDEO INTERCOM: (pictured right)

This is a high quality 'mono' video intercom system requiring just 6 core cable (No coax) over distances of 150mtrs. (max)

The VK6 offers excellent sound and picture quality and an IR assisted camera for high performance in very low light.

Not to be confused with budget video kits, the VK6 is a high end product that will give years of reliable service.

Kit includes weather shield for exposed positions.

Additional monitors (maximum 3) can be added to expand the system.

VIDEX VK C 6 VIDEOPHONE: (pictured right)

Combined video intercom and digipad.

Combining the excellent VK6 video intercom system (above) with a VX 800 Digital entry pad. The optimum in security and functionality in a single weather protected case.

Videx durability and longevity of service comes as standard.

VIDEX CVK 6 COLOUR VIDEO INTERCOM:

Colour video intercom system.

VIDEX – ADDITIONAL MONITORS / HANDSETS:

Available for all video intercoms. (Max 3 monitors per system)

See opposite page for further intercoms and digipads.

Intercom Systems

Digital Entry Pad

VIDEX VX 800: (pictured right)

The VX 800 is a robust design with a smart appearance. A full metal casing and weather shield protect from the environment and misuse.

The keypad is illuminated for night time use and an LED display confirms acceptance of the correct code. Two separate relays allow a pulse contact with one code and a latched contact with another, thus permitting a 'hold open' command with its own separate code.

The VX digipads are available as stand alone units or built in to both audio and video intercom systems.

VX 800: 2 INPUT CODES & 2 SWITCHING RELAYS.
VX 900: 60 INPUT CODES & 2 SWITCHING RELAYS.

Dimensions: 155 x 105mm.

DIRACOM

DIRACOM Digital Wireless Intercom

DIRACOM: (pictured right)

This high quality wire free digital intercom uses high end components to give clear sound quality over a 100 – 150mtr range.

Using Siemens digital telephone handsets and proven telecom technology the Diracom system offers the best quality wireless intercom available.

Fully pre-wired, the system is supplied with plain English step by step instructions and is the choice of professional installers when wireless technology is required.

TELGUARD Telecom Intercom

TELGUARD JUNIOR: (pictured right)

An intercom at the entrance linked with the existing telecom network.

Suitable for long driveways and separate buildings serviced by a common entrance, apartment buildings requiring retro-fit intercom systems and for controlling access from anywhere your phone works. The Telguard system dispenses with the need for cabling between the entrance and the buildings by utilising the existing telecom network.

For long cable runs and apartment blocks this is a time and money saver. No work is required within any number of separate dwellings or offices and no maintenance is required.

A BT line is required at the entrance and all communication from the intercom system is channelled to existing telephones within any number of properties.

The hash (#) button on the telephone handset is used to open gates / doors. Telephone numbers are short coded and listed against names on a legend plate at the entrance.

This system can be operated by telephone or cell phone allowing control of access from anywhere in the world. The entrance panel can also be used as a digital entry pad.

All numbers and codes are pre-entered during assembly and the system is straightforward to install.
